Storage

+2 to +30°C Only store DrugWipe within this temperature range.

Incorrect storage conditions, such as high temperatures or frost, will damage the test.

Use

+40°C

+5 to +40°C Use DrugWipe within this temperature range.

If using the test in the rain or snow, ensure that DrugWipe 5 S is protected from moisture.

Dispose of used and expired tests with other nonrecyclable waste. Please comply with your local regulations for waste disposal.

Quality Control

DrugWipe 5 S has an integrated control line (CL). The control line indicates that the test is fully functional and that the screening test has been performed correctly.

Please observe any additional quality control regulations that apply in your institution or establishment.

Cross Reactions

We have analysed the substances that cross-react with DrugWipe 5 S in our laboratory. We can provide you with information about possible cross reactions on request.

Other DrugWipe Products

For the detection of cannabis, opiates, cocaine, amphetamines/methamphetamines/ecstasy, ketamine and benzodiazepines.

DrugWipe[®] 5 S Instructions for Use

Saliva test for the detection of

- Cannabis
- Opiates
- Cocaine
- Amphetamines/Methamphetamines

Intended Purpose

DrugWipe 5 S is intended to be used for the qualitative detection of drugs in human saliva by trained professionals.

The test detects cannabis, opiates, cocaine and amphetamines/methamphetamines (including MDMA/ ecstasy). The measurement procedure delivers a preliminary result (screening procedure). Verification of the results is required, in particular if these are positive. Liquid or gas chromatography combined with mass spectrometry (LC/MS, GC/MS) are the preferred broad-spectrum methods.

Test Principle

DrugWipe 5 S is an immunological quick screening test. The sample collector transfers the sample to the test strips. which contain drug-specific antibodies. If the sample contains drugs, they will bind to the antibodies.

The test starts as soon as you break the integrated glass ampoule and release the liquid. With the help of the liquid, the illegal drugs bound to the antibodies can migrate to the test line. The red test line is evaluated visually.

Package Content

Read Before Performing the Test

- 1. DrugWipe 5 S is for single use only.
- 2. Discard the test if the expiry date has been exceeded.
- 3. At temperatures below +5°C, warm up the test prior to opening, e.g. with your hands.
- 4. Avoid temperatures in excess of +40°C. Damage to the test may occur.
- 5. Discard the test if the packaging is damaged, if any moisture has penetrated the packaging, or if a control line has already changed colour to red.
- 6. Do not open the packaging until shortly before the test is to be used.
- 7. Saliva is potentially infectious. We recommend that you wear disposable gloves to avoid contact with saliva.

Performing the Test

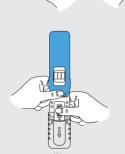

Results Interpretation

- In the case of strongly positive samples, a result may be visible after just 3 minutes.
- You can read the test result after 5 minutes.
- The result remains valid for up to 10 minutes after the end of the test.
- The test result is to be interpreted as positive even if the test lines only undergo a slight or incomplete colour change.
- Ensure that you have sufficient lighting when evaluating test results, e.g. by using a torch if necessary.

The read out window shows 1 or 2 drug groups and a control line for each test strip. The following abbreviations are used:

- CA Cannabis (THC/Marijuana/Hashish)
- AM Amphetamines
- MET Methamphetamines (MDMA/Ecstasy)
- CO Cocaine (Crack)
- OP Opiates (Heroin/Morphine)
- CL Control Line

CA

All control lines must turn red in order for the test to be valid. The test is negative for those drugs where none of the test lines turn red.

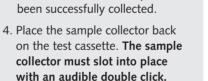

Positive result = drugs consumed

All control lines must turn red in order for the test to be valid. The test is positive for the drugs for which the test line turns red.
